

The graph displays the number of nodes in the network over a 24-hour period. The blue line starts at approximately 40 nodes at 0 hours, rises sharply to about 95 nodes by 1 hour, and then remains relatively stable with minor fluctuations until 2 hours. After 2 hours, the number of nodes drops sharply to around 10 nodes. From 2 to 4 hours, the number of nodes remains low, fluctuating between 10 and 15. At 4 hours, there is a small increase to about 20 nodes, which then drops back to 15 at 5 hours. From 5 to 6 hours, the number of nodes increases to about 25 and remains stable. At 6 hours, there is a sharp drop to about 10 nodes. From 6 to 7 hours, the number of nodes increases to about 20 and remains stable. At 7 hours, there is a sharp drop to about 10 nodes. From 7 to 8 hours, the number of nodes increases to about 20 and remains stable. At 8 hours, there is a sharp drop to about 10 nodes. From 8 to 9 hours, the number of nodes increases to about 20 and remains stable. At 9 hours, there is a sharp drop to about 10 nodes. From 9 to 10 hours, the number of nodes increases to about 20 and remains stable. At 10 hours, there is a sharp drop to about 10 nodes. From 10 to 11 hours, the number of nodes increases to about 20 and remains stable. At 11 hours, there is a sharp drop to about 10 nodes. From 11 to 12 hours, the number of nodes increases to about 20 and remains stable. At 12 hours, there is a sharp drop to about 10 nodes. From 12 to 13 hours, the number of nodes increases to about 20 and remains stable. At 13 hours, there is a sharp drop to about 10 nodes. From 13 to 14 hours, the number of nodes increases to about 20 and remains stable. At 14 hours, there is a sharp drop to about 10 nodes. From 14 to 15 hours, the number of nodes increases to about 20 and remains stable. At 15 hours, there is a sharp drop to about 10 nodes. From 15 to 16 hours, the number of nodes increases to about 20 and remains stable. At 16 hours, there is a sharp drop to about 10 nodes. From 16 to 17 hours, the number of nodes increases to about 20 and remains stable. At 17 hours, there is a sharp drop to about 10 nodes. From 17 to 18 hours, the number of nodes increases to about 20 and remains stable. At 18 hours, there is a sharp drop to about 10 nodes. From 18 to 19 hours, the number of nodes increases to about 20 and remains stable. At 19 hours, there is a sharp drop to about 10 nodes. From 19 to 20 hours, the number of nodes increases to about 20 and remains stable. At 20 hours, there is a sharp drop to about 10 nodes. From 20 to 21 hours, the number of nodes increases to about 20 and remains stable. At 21 hours, there is a sharp drop to about 10 nodes. From 21 to 22 hours, the number of nodes increases to about 20 and remains stable. At 22 hours, there is a sharp drop to about 10 nodes. From 22 to 23 hours, the number of nodes increases to about 20 and remains stable. At 23 hours, there is a sharp drop to about 10 nodes. From 23 to 24 hours, the number of nodes increases to about 20 and remains stable.
